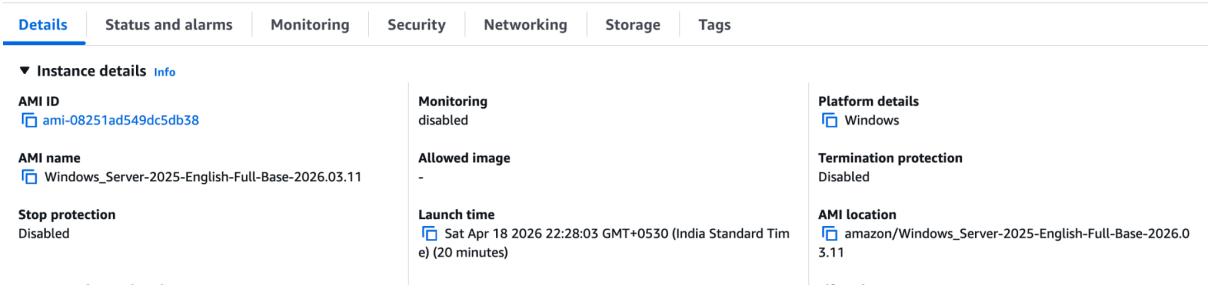
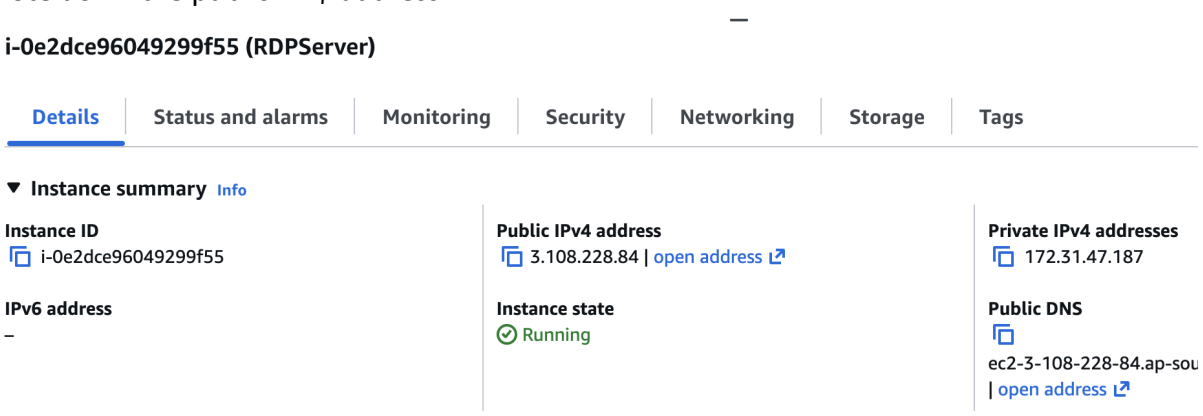
**Task 1:**

Step-1:

Create an EC2 instance with a Windows VM, in Network settings, allow RDP from anywhere IP address to connect remotely. RDP requires inbound access to the instance. While launching an instance, select create key pair, this will be used to retrieve the password which is to be used to connect to the instance during RDP.



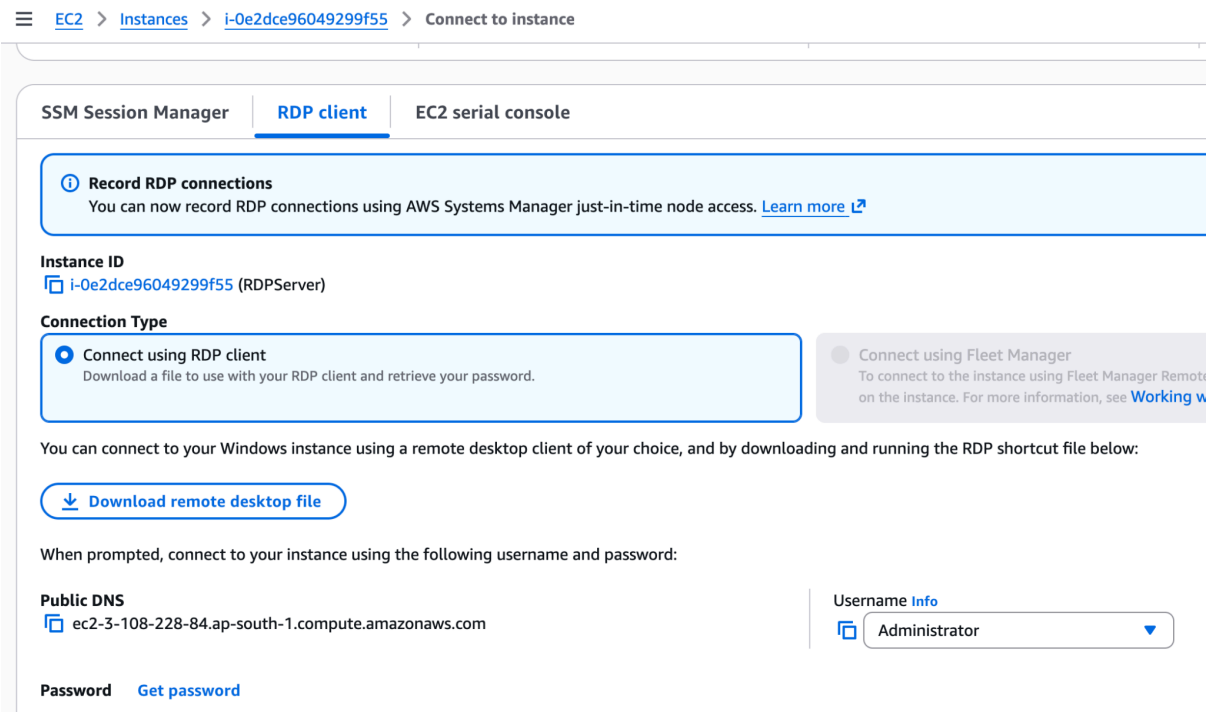
Note down the public IPv$ address:



Step-2:

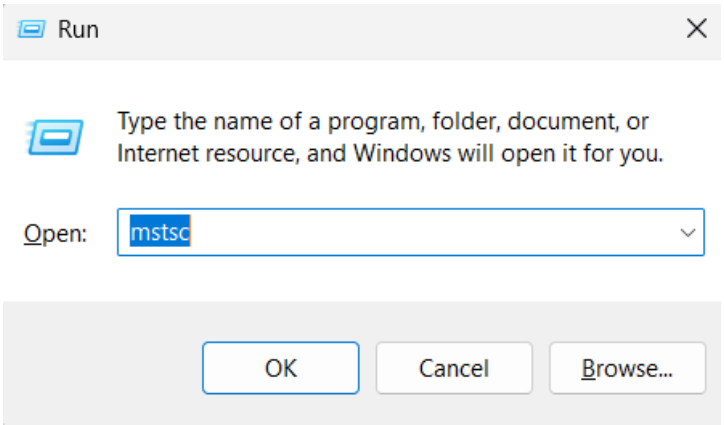
Once the instance is up and running, get the administrator password to connect to the VM from a Windows laptop. The password can be retrieved by clicking the “Get password” button and uploading the “.pem” file, and then clicking the “Decrypt password” button.

Copy the username and password.



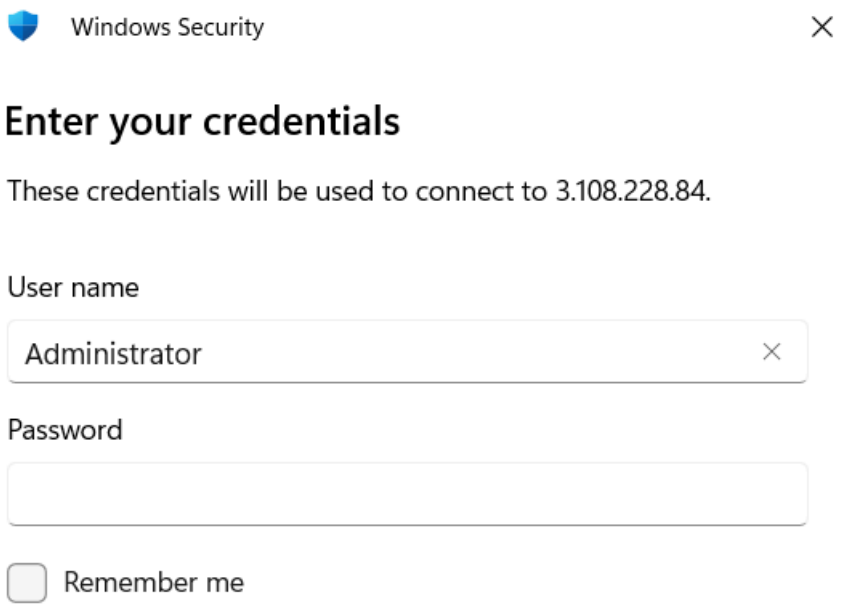
Step - 3:

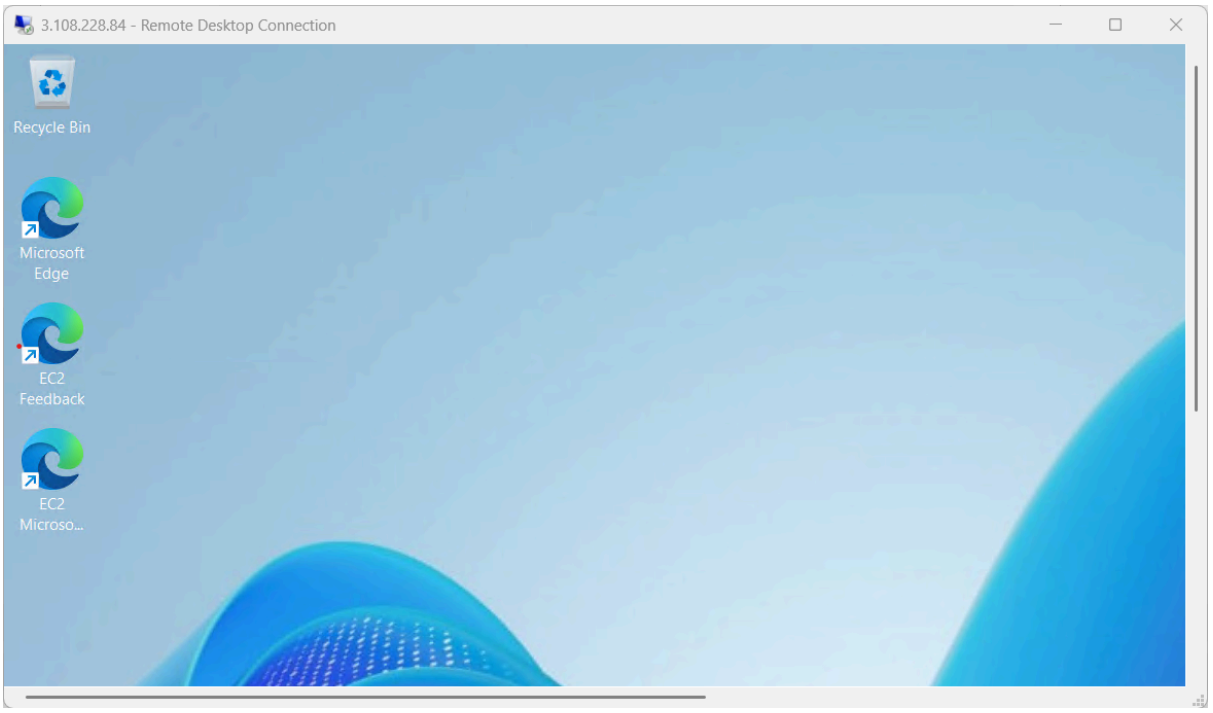
Connect through RDP from windows laptop, by pressing Windows key + R, and type “msctc”.



Step - 4:

Enter the copied username and password to connect to the VM





Step - 5:

Once connected, open the command prompt and enter “systeminfo” to get the details:
